

► The pellet that solves your by-product management problems

EPS delivers cost-effective steel mill by-product management, on- or off-site, producing pellets for re-melting filter cake and flue dust, fines, dust and sludge.

Convert fines, dust and sludge to competitively priced **high-quality feedstock**

Homogenous blend and no voids for **standardized, consistent performance**

Low binder content for **more material recovery**

Durability for handling and transportation

Flexible plant design allows quick changes on pellet diameters and additives

(Not actual size — image magnified)

We engineer our extruded pellets to meet your cost, performance and handling requirements

- By-product management that creates value
- Sell or use as a feedstock material
- Better metallics reclamation for improved profitability
- Lower raw material costs
- Reduces/eliminates on-site storage
- Reduces/eliminates disposal and landfill costs
- Environmentally sound solution

TMS International Extruded Product Services

Economically attractive and environmentally sound

EPS uses a scalable process to convert flue dust and filter cake fines, dust and sludge to extruded pellets. Pelletizing these by-products produces a competitively priced, high-quality feedstock material.

Pellets engineered to your specifications

EPS engineers pellets to diameter requirements, as well as handling and performance specifications. We deliver cost-effective feedstock pellets for specific applications.

Safety and sustainability

EPS comes with our industry-leading approach to safety and sustainability, which includes recycling, energy-efficient operations and beneficial reuse. Count on TMS International for seamless integration with your operation, value-adding capabilities and a commitment to problem solving.

Your partner in reducing environmental impact

The first TMS International **EPS plant in Latin America** has opened on-site at CAP Steel in Concepción, Chile. EPS is the future of by-product management — sustainable, cost-effective and supporting our customers' goal of the circular economy within their production plants.
